

# SCORPION STANDARD 3.78"/3.90"

BAKER 10 SETTING TOOL

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

1. 3.78" or 3.78" Scorpion Frac Plug
2. 2" Composite Frac Ball
3. (5) Shear Screws  
- 3/8" x 16 x 5/8"
4. (3) Setting Sleeve Screws  
- 1/4" x 20 x 1/4"
5. Setting Sleeve
6. Tension Mandrel

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

Slide tension mandrel into sleeve as shown

Make sure jam nut is against the shoulder of the tension mandrel

**STEP 1**

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

**STEP 2**

Support the setting sleeve while threading the tension mandrel into the bottom of the Baker #10 setting tool.

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

**STEP 3**

Tension mandrel will stop when it bottoms out, then spin the jam nut against the bottom of Baker #10 setting tool.

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

**STEP 4**

Tighten using pipe wrenches holding backup on Baker #10 setting tool and applying force to jam nut.

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

**STEP 5**

Thread the setting sleeve onto the Baker #10 setting tool by hand.

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

**STEP 6**

**\*\* DO NOT tighten with pipe wrenches or apply setting sleeve screws YET; the setting sleeve needs to remain loose to complete future steps\*\***

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

NO FRAC BALL INSERTED FOR BALL  
DROP

FRAC BALL INSERTED FOR BIP

**STEP 7**

Depending on configuration needed for Ball Drop or BIP (Ball in Place); follow the steps above.

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

**STEP 8**

Now insert the top of the plug into the bottom of the setting sleeve.

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

**STEP 9**

Orient the holes in the plug to line up with the holes in the setting sleeve and thread all (5) shear screws into the plug making sure they are flush.

It will be required to rotate the setting sleeve back towards the plug to ensure all (5) shear screws are inserted properly.

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

**STEP 10**

Once all (5) shear screws are inserted flush inside the plug; rotate the setting sleeve back towards the plug until a gap of  $1/8"$  to  $1/4"$  is achieved and the shear screws are covered by setting sleeve.

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

**STEP 11**

Now tighten the (3) setting sleeve screws ensuring they go down into the thread relieve and are flush with the outside of the setting sleeve.

## SCORPION STANDARD 3.78"/3.90" - BAKER 10

**COMPLETE**

Installation is  
now completed.

**SAFETY NOTE:**

\*\* Follow the recommended  
RIH procedures, bypass  
charts, ball seat rates, etc. \*\*
